

On behalf of the University of Maine Orono Mechanical Engineering Technology Program, this letter is a request for donations toward our senior capstone project. These donations would go towards gear, testing materials, travel and possibly room and board while on the trip. Any donations are greatly appreciated and would be used as soon as possible due to testing and design strategies that need to be done in order to compete.

Mission: To design a snowmobile that achieves reduced emissions and noise characteristics while keeping performance equal to or better than the performance of stock snowmobiles and to run and operate on various fuels given ranging from E40 to E85. The competition is during spring break (March 4 to March 9) in Houghton, Michigan. Please visit our website to learn more about our team.
