

Field Trip to Canada Without Leaving the Classroom

Temperatures

1. Take turns saying the poem out loud until you memorize it:

**0 is Cold
10 is not
20 is warm
30 is hot!**

2. Teach yourself this trick for converting Celsius temperatures to their approximate temperature in Fahrenheit. You can practice around town when you see a bank sign displaying temperatures. You will only be a few degrees off.

To convert Celsius to Fahrenheit:

Double the Celsius temperature, then add 30.

Example: $17 \times 2 = 34$

$34 + 30 = 64$

17 Celsius = 64 Fahrenheit

3. Convert this: 22 Celsius converts to _____ Fahrenheit.

4. If someone said to you, "It must be really cold in Canada because the temperature is only 20", what would you reply?
