

MARK YOUR CALENDARS

for this very special event

SEVENTEENTH ANNUAL

University of Maine Clinical Geriatrics Colloquium (Virtual)

Geroscience — From Cells to Community: What it Means to Your Life and Your Practice

Tuesday, November 15, 2022 • 8:30 a.m.–3:30 p.m.

This year's colloquium focuses on the clinical and practice implications of advances in the science of aging.

An online, webinar format will be used again this year to encourage broad participation by health and human service practitioners, administrators, educators, students, researchers and older adults across the state, nation and beyond.

Keynote addresses and special topic panels and workshops will address:

- The mechanisms of aging — cell senescence, inflammation, oxidation, genetics
- The biology of organ system and limb restoration and rejuvenation
- The business and ethics of life extension — vitamins, supplements and nontraditional therapies
- Engineering, cognitive assessment and assistive technologies
- Technological solutions for independent living
- The political, psychological, and social dimensions of improved health and increased life span
- Implications for the workforce, families, communities, and retirement planning

Look for program details and registration information coming later in the spring/early summer.
