

## The University of Maine DIVING EMERGENCY MANAGEMENT PROCEDURES

A diving accident victim could be any person who has been breathing compressed gas underwater regardless of depth. Decompression sickness and arterial gas embolism, collectively referred to as decompression illness (DCI) can affect any diver on any dive and may present with a wide variety of signs and symptoms. In any case, it is essential that emergency procedures and medical treatment is initiated as soon as possible.

The general plan for a diving accident victim is to **Call 911** and arrange for transport to the nearest hospital or medical facility by ambulance. The receiving physician will provide appropriate care and, if necessary, arrange for transportation to a hyperbaric facility. Even seemingly mild signs and symptoms (i.e. numbness/ tingling) can indicate a serious diving injury. When in doubt, always assume DCI and begin the emergency response procedures, below.

### EMERGENCY RESPONSE PROCEDURES

### +++ FIRST RESPONDERS/ EMS/ HOSPITAL ATTENDANTS +++

The individual seeking care has been diving using compressed gas. Although this person may appear healthy and uninjured, it is possible that serious neurological or other injuries are present. In any case, it is essential that medical evaluation and treatment is initiated as soon as possible. It is critically important that this individual be provided **High-Flow Oxygen** (100% O<sub>2</sub>, 15 liters/minute, Non-rebreather mask) until they are evaluated by a physician.

### +++ EXAMINING PHYSICIANS +++

Pressure related diving injuries can occur in any person who has been breathing compressed gas underwater regardless of depth. Decompression sickness and arterial gas embolism, collectively referred to as decompression illness (DCI) can affect any diver on any dive and may present with a wide variety of signs and symptoms. Evaluation of this injured diver should include a full physical and neurological examination. Consultation with a physician knowledgeable in diving medicine is encouraged.

Thank you for ensuring the best possible care for our diver!

**The University of Maine  
DIVING EMERGENCY MANAGEMENT CONTACT INFORMATION**

**UMaine Diving Safety Officer (DSO)**

Colby Johns  
Mobile: (860) 377-3020

**Divers Alert Network (DAN)**

Emergency Hotline: 1-919-684-9111  
Medical Information: 1-919-684-2948  
Based at Duke University Medical Center, DAN has diving medical specialists on-call 24 hours/day to answer questions and provide guidance on diving injuries and care. DAN can also help to arrange transport to the nearest hyperbaric facility if necessary.

**Maine Hyperbaric Centers**

*Southern/ Central Maine*

St. Mary's Regional Medical Center  
Hyperbaric and Wound Care Center  
95 Campus Avenue  
Lewiston, ME 04240
