### SOIL QUALITY ANALYSIS

Report For: **EXAMPLE SOIL QUALITY ANALYSIS**

with **Biological & Physical Constraints**

#### NUTRIENT CHEMISTRY PARAMETERS

- **Soil pH**
  - **Level Found**: 6.3
  - **LOW**: 6.0-7.0 (N/A)
  - **MEDIUM**: 4.9-6.0
  - **OPTIMUM**: 6.0-7.0
  - **ABOVE OPTIMUM**: 6.1-7.0

- **Major nutrients**
  - **Nitrate-N (ppm)**: 25
  - **Phosphorus (lb/acre)**: 49.0
  - **Potassium (% Sat)**: 14.1
  - **Calcium (% Sat)**: 65.7
  - **Magnesium (% Sat)**: 20.2
  - **Sulfur (ppm)**: 11

- **Micronutrients**
  - **Boron (ppm)**: 0.4
  - **Copper (ppm)**: 0.95
  - **Iron (ppm)**: 2.2
  - **Manganese (ppm)**: 9.5
  - **Zinc (ppm)**: 1.2

#### RECOMMENDED ADDITIONS FOR

**ORGANIC GARLIC - Crop Code # 392**

No lime recommended. Soil pH is at or above the optimum level for this crop.

Magnesium level is sufficient to meet crop requirement.

To meet major nutrient requirements, apply (on each 1000 sq. ft.):
- Nitrogen (2.5 lb) - 20 lb bloodmeal or 35 lb soybean meal or 25 lb crabmeal.
- Phosphorus (1.1 lb) - 4 lb bone meal as a starter only, in early spring (optional).

If you are using wood ash, discontinue until lime is needed again.

Excessive potassium: If you are using wood ash, discontinue.

Available N credit: No addnl nitrogen needed for this crop. Apply 1/2 rate next crop. 15 bushel cow, pig, or horse manure or 7-8 bushel poultry, sheep, goat, or rabbit manure/1000 sq. ft. can substitute for 1/4-1/3 recommended nutrients (apply in fall).

Fertilizer may be broadcast in spring, but is best banded 2-3 in. below & beside rows.

Till in manure, compost, or leaves each year to build and maintain soil organic matter. This will improve the nutrient and water holding capacity of your soil. Manure or compost will also supply sulfur.

For information on micronutrient management and recommendations, see enclosed form.

### NUMERICAL RESULTS

Test methodology: pH in water and Mehlich buffer, available nutrients by modified Morgan extract. Organic matter measured by LOI, P determined colorimetrically, all others measured by ICP-OES.

Soil Texture Class: Loam

RECOMMENDED ADDITIONS & MANAGEMENT PRACTICES

To Improve Soil Biological Health:

Include biomass crops in rotation to improve org. matter & biological activity.

Increase use of compost or cover crops to improve OM & biological activity.

Include a legume green manure or animal manure to improve soil N supply.

To Improve Soil Workability & Water Handling

Include sod in rotation to build/maintain structure, water storage, & drainage.

Manure will also improve soil structure, water storage, & drainage.

Avoid traffic on wet soil to minimize compaction.

Break up traffic pan by mechanical ripping and/or deep rooted crops.

Improve infiltration with surface mulch, zone tillage, or deep-rooted crops.
