St. Joseph Hospital

SAFE/SANE INTRO

Keri Kapaldo, RN, BSN, ME-SAFE-A, SANE-A

What is a SAFE or SANE?

- **SAFE:** Sexual Assault Forensic Examiner
 - Registered Nurses, Nurse Practitioners, Physician Assistants, and Physicians
- **SANE:** Sexual Assault Nurse Examiner
 - Board certification through IAFN

Definition of a SAFE

A Sexual Assault Forensic Examiner is a health care provider who has been specially trained to provide comprehensive care for the sexual assault patient, who demonstrates competency in conducting a forensic exam, and has the ability to be an expert or fact witness in court.

State of Maine SAFE Program

- In Maine, the SAFE program is “housed” under DHHS, Office of Child and Family Services
- The SAFE Advisory Board issues recommendations for healthcare providers and these recommendations are intended to:
 - Promote the development of specialized skills necessary to provide comprehensive and quality medical-forensic care for the patient who has suffered sexual assault/abuse
 - Ensure training in the collection, documentation, and management of evidence collection during the medical forensic exam
 - Prepare healthcare providers to testify in legal proceedings

Did you know?

- There's separate training and certification requirements for adults/adolescents and pediatrics.
- Most SAFEs only care for sexual assault and child sexual abuse cases.

...BUT the SAFE program at St. Joseph Hospital cares for all victims of crime.

We are a comprehensive program covering sexual assault, domestic violence, strangulation, child abuse, elder abuse, and human trafficking.
